Further High Grade Intercepts for the Empire Gold Discovery, Odienné, Côte d'Ivoire

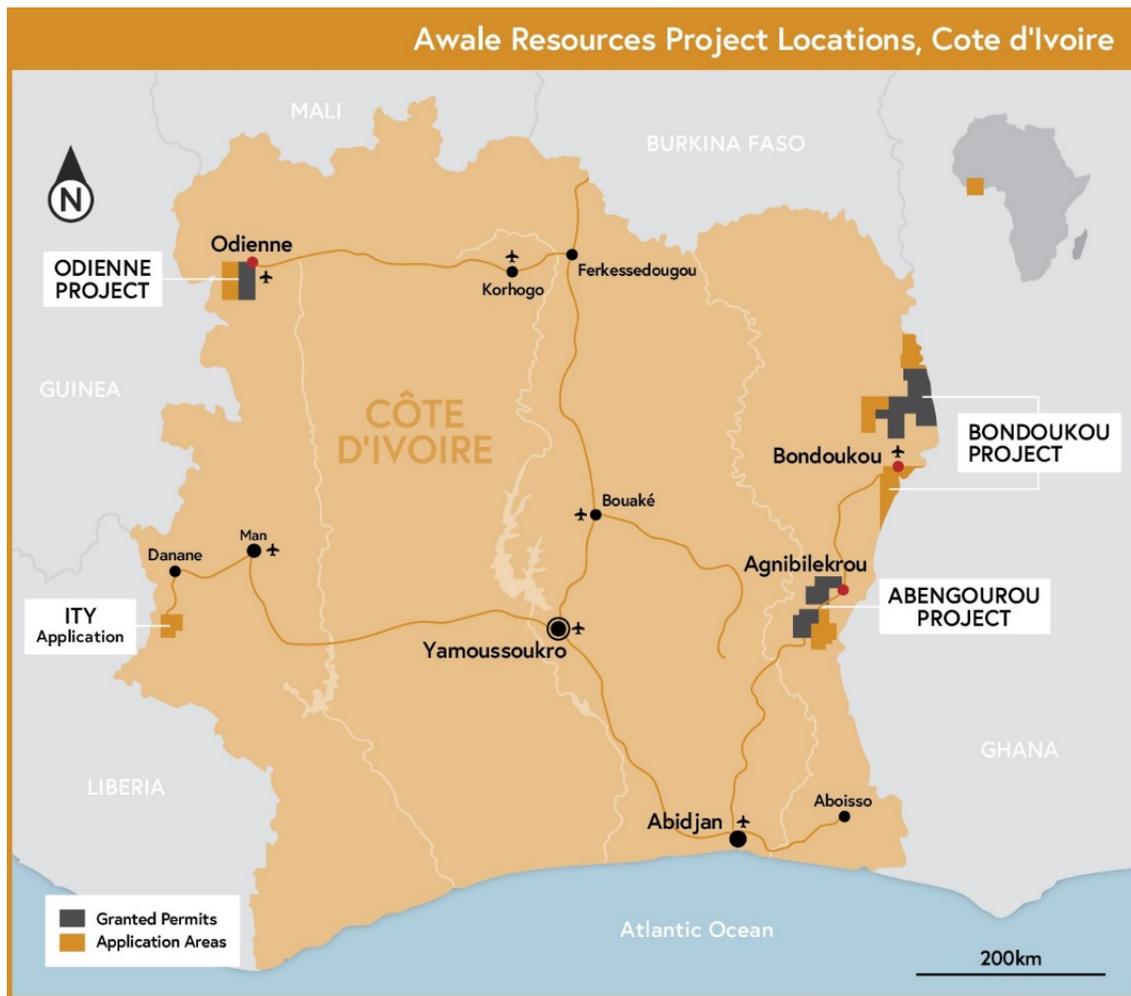

Figure 1: Awalé Project Location – Cote d'Ivoire

Empire Main – Drill Plan

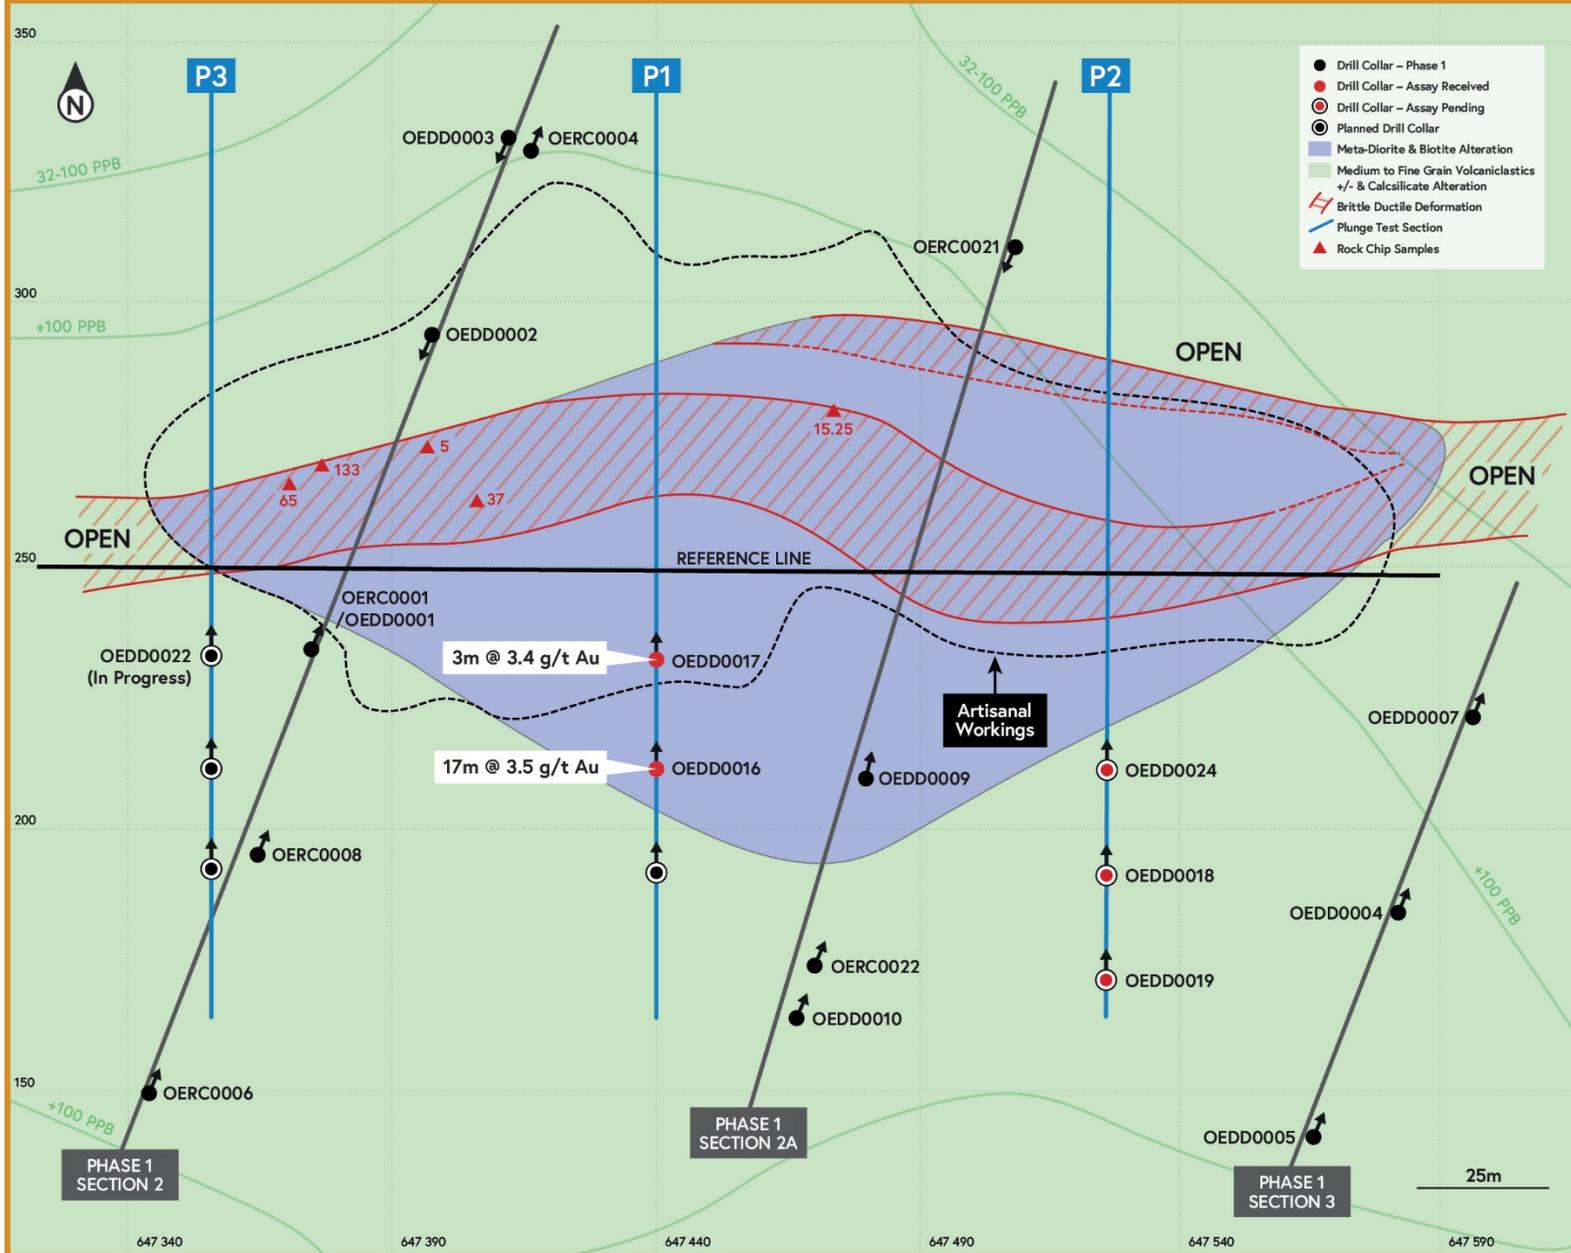

Figure 2: Empire Main Prospect – Phase 2 Drill Collars Over Geology

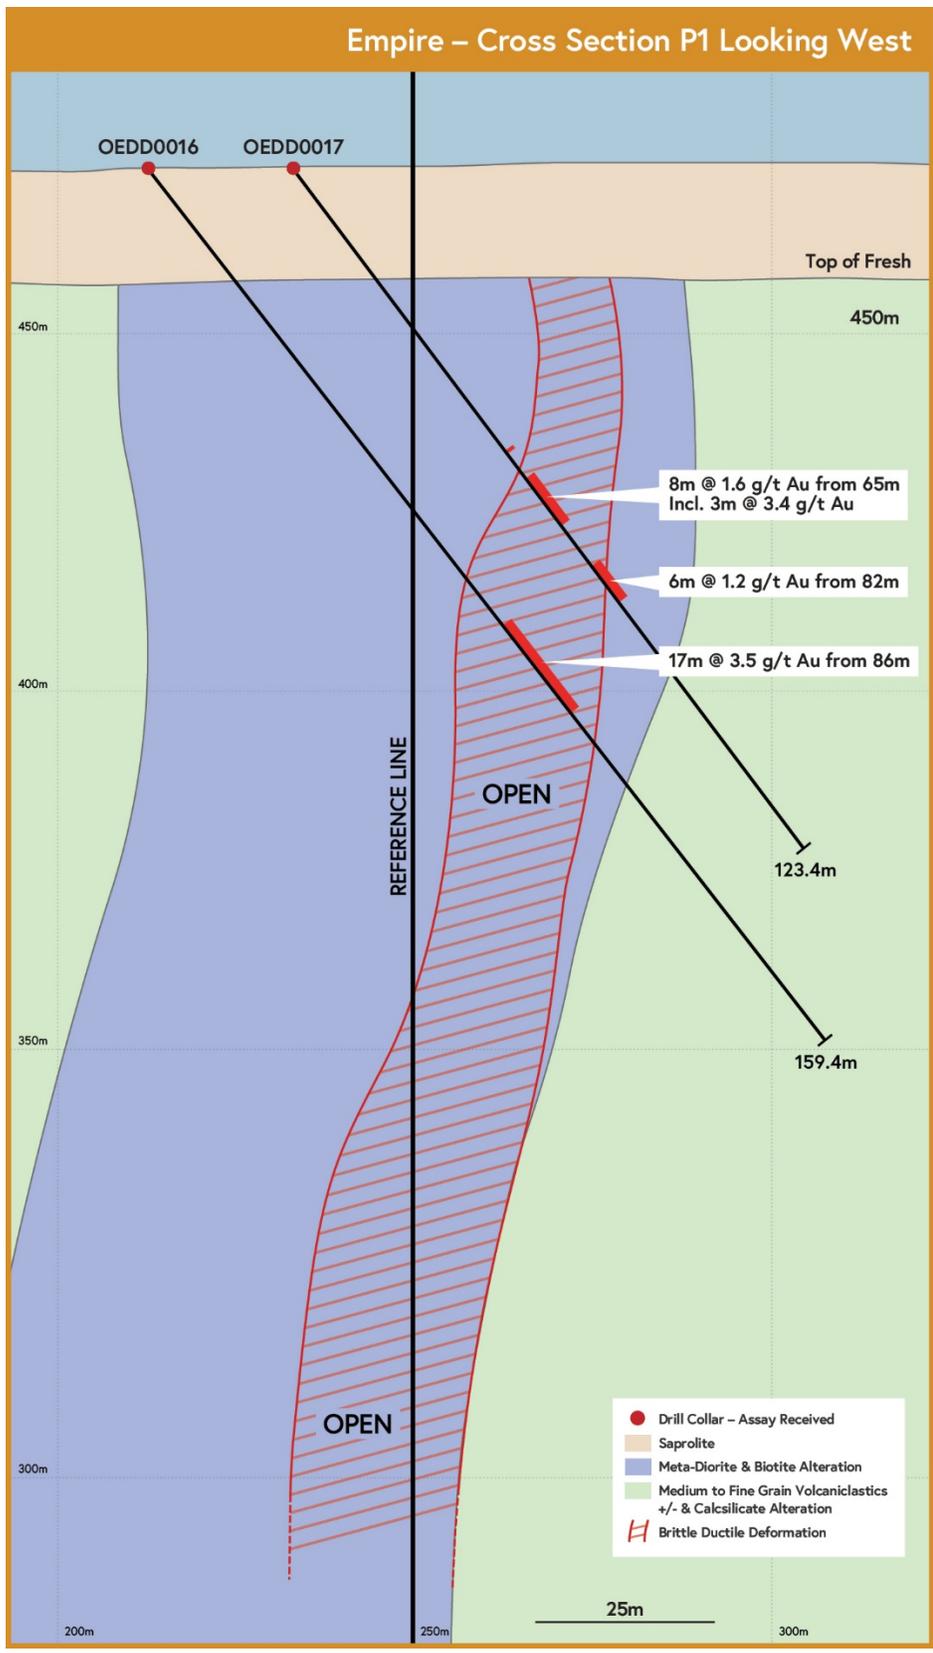

Figure 3: Empire Main Prospect - Drill Section P1 - Holes OEDD-16 and OEDD-17

Empire – Long Section Looking North

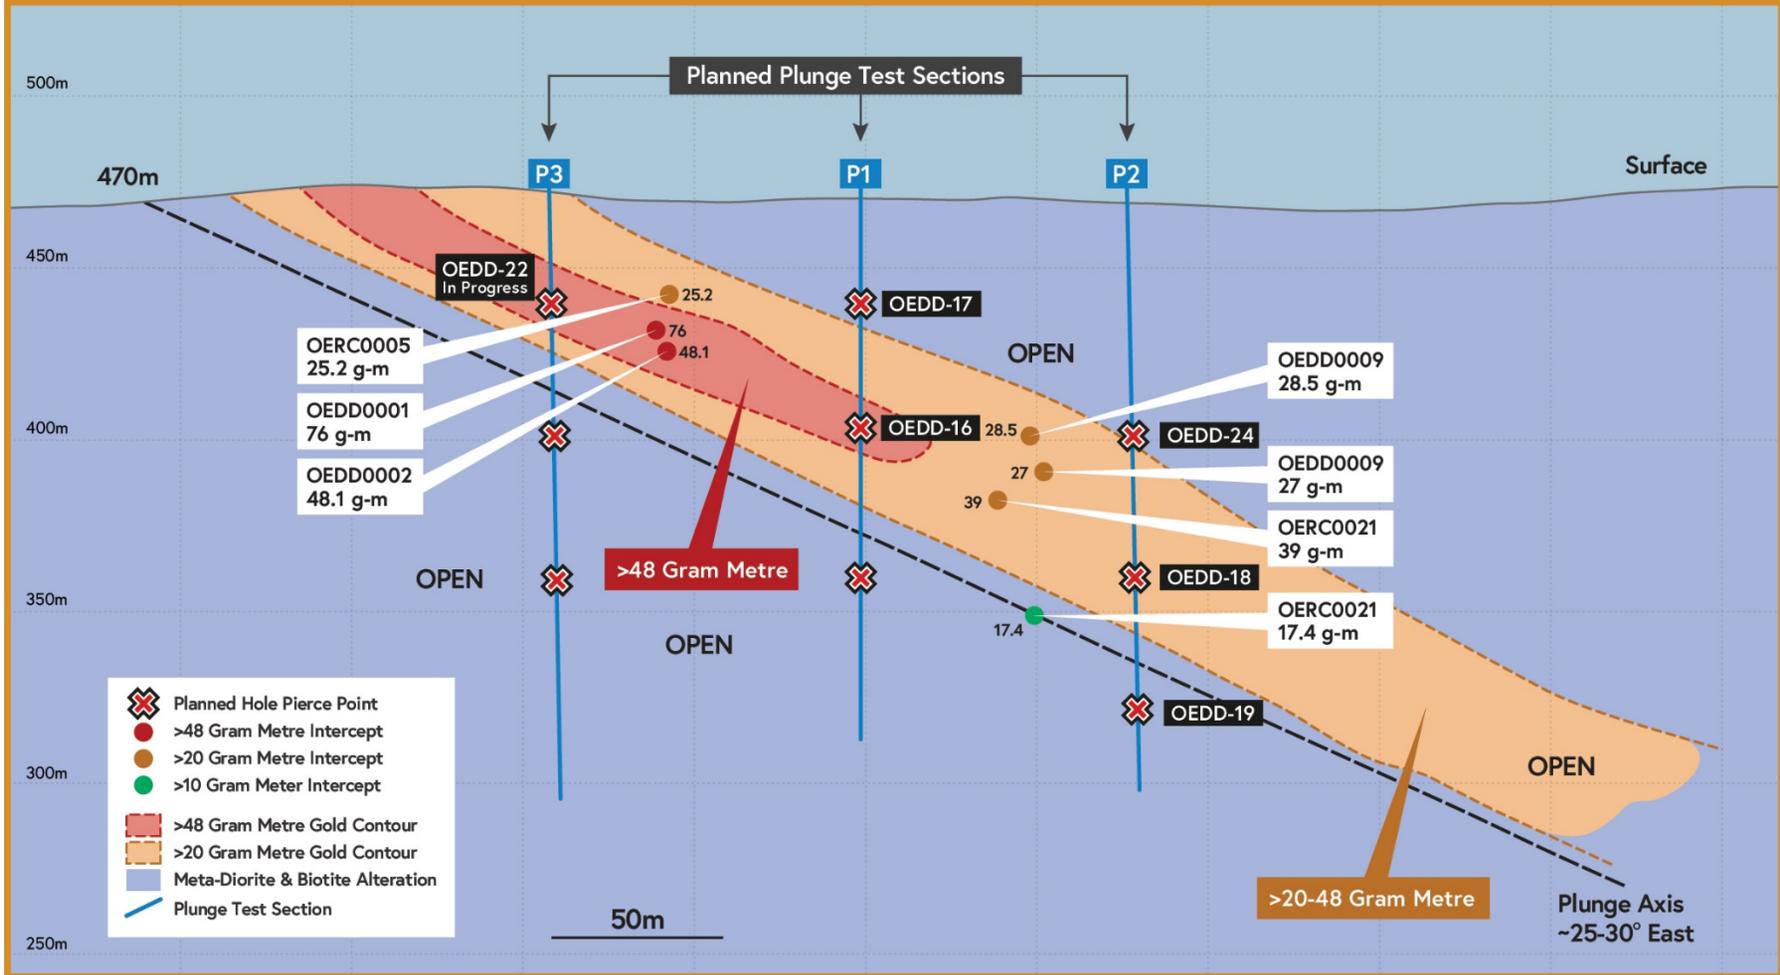

Figure 4: Long section through the Empire Main discovery- Showing Gram Meter Contours.

Empire Extension Targets – Gridded Gold Over Magnetics

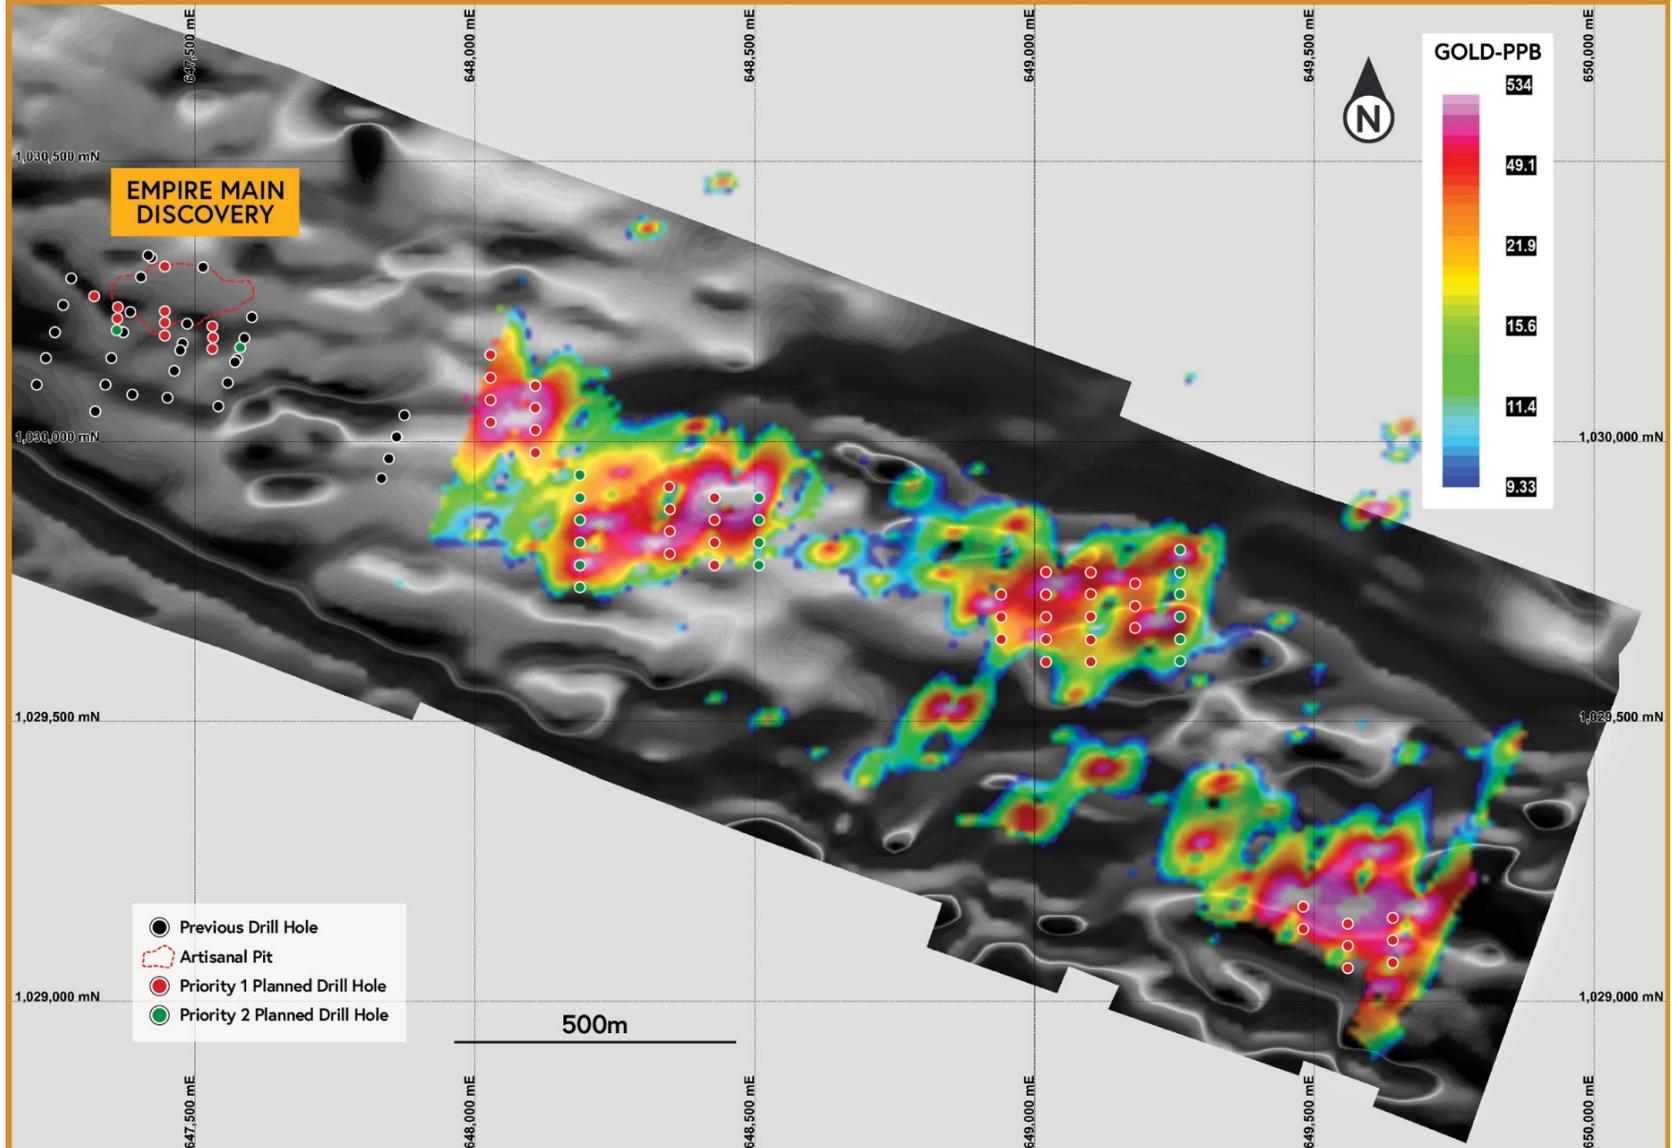

Figure 5: Empire Discovery extension targets with 50 holes planned. Each of these targets is at least 300-400m long at >100ppb from Auger geochemistry. The targets add a potential 1200m of strike to the Empire discovery. Image depicts gridded gold in auger drilling over high resolution ground magnetics.
