

## Awalé Launches 15,000-Metre Drill Program Targeting New Discoveries on 100%-Owned Permits

**Figure 1: Odienné Project** - Three granted 100%-owned permits (Sienso, Sama, and Seydou) are shown above in black outline. Background image shows high-resolution aerial magnetic data, flown by helicopter at a 100-metre line spacing. Magnetics is used to build a structural and lithological framework and target potential mineralized corridors.

## Fremen Target - Planned Aircore Drilling over Gold in Termite Mound Geochemistry

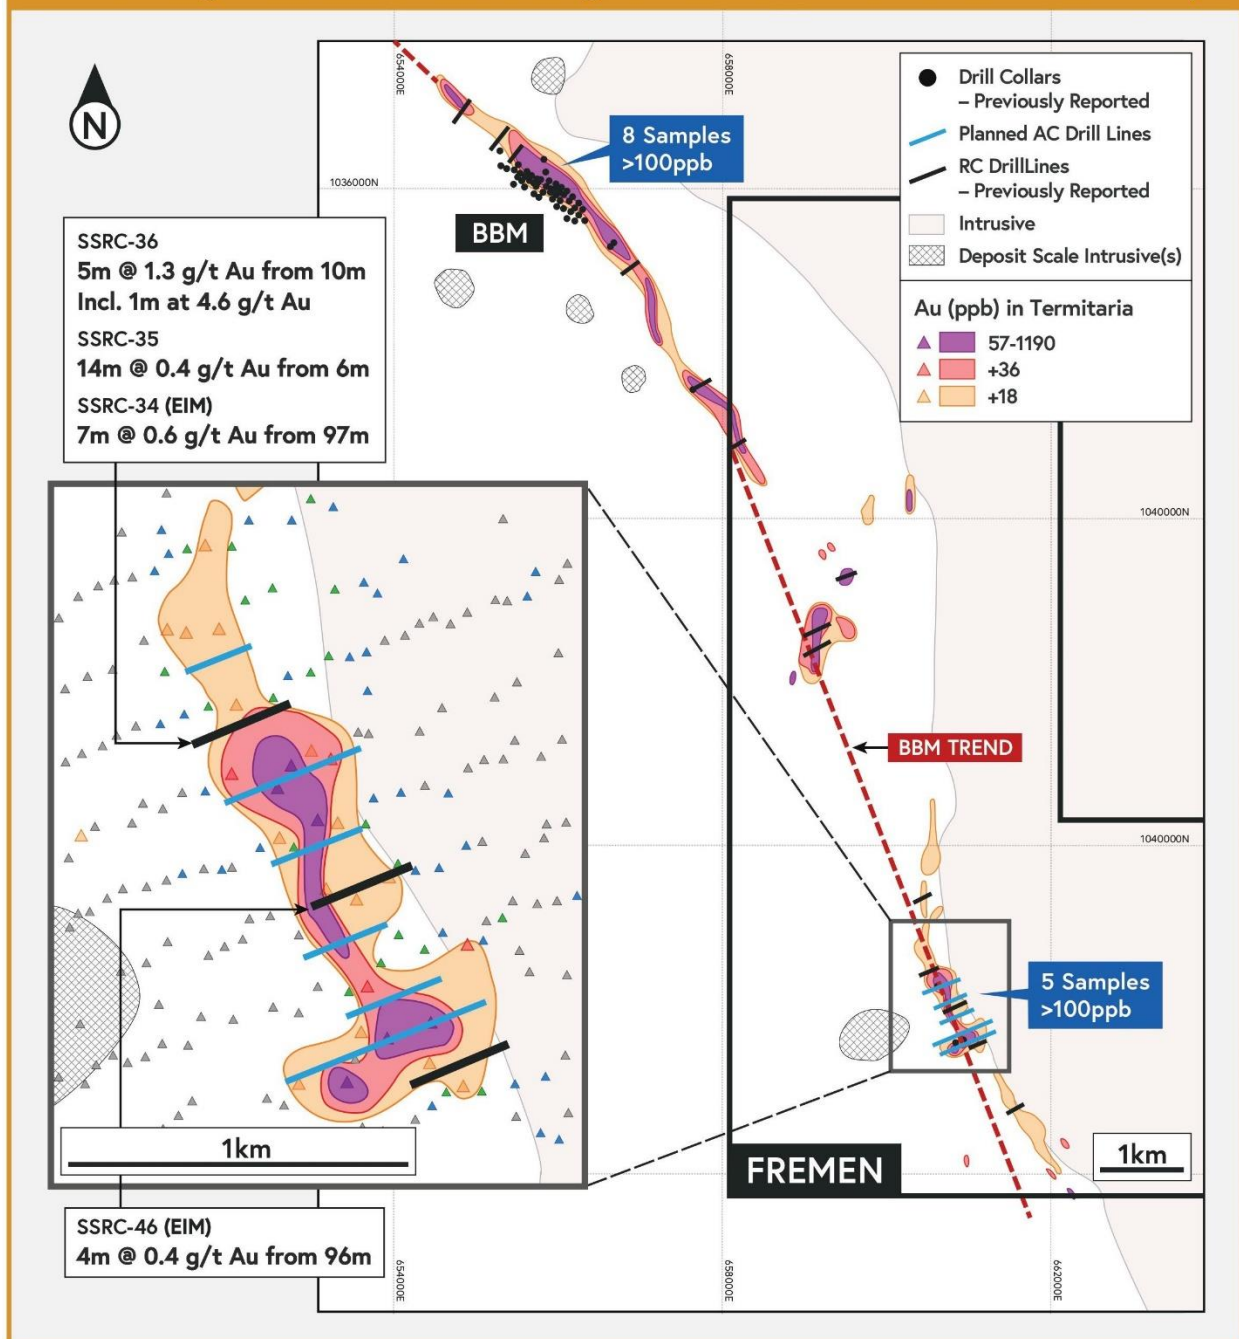

Figure 2: Fremen Target – Showing gold in termite mound geochemistry along the same structural trend as BBM. Inset shows higher grade core to a 5-km-long anomaly where 5 samples have returned >100ppb gold along the same structural trend. For reference, BBM has a 2 km zone with eight (8) termite mound samples above 100ppb gold. Callouts are showing gold in previous scout RC drill intercepts.
